

AFTERCARE

Your tattoo has been applied using sterile equipment, but the aftercare is just as important for your tattoo.....

Remove the dressing after 1 Hour.
Wash thoroughly with warm water (no soap) and pat dry (not rub) with a clean towel.
Put a thin layer of Bepanthen cream or A&D ointment over the tattoo and wear a plastic dressing i.e. food bag or cling film over it and change every 2 hours.
Keep using the cling film and Bepanthen cream for 2 days and 2 nights.

Your tattoo may form a scab, DO NOT worry this is normal.

DO NOT use spray tans, sauna's, sun-bed's, go swimming or sunbathing UNTIL your tattoo is completely healed, this is about 4 weeks depending on how quick you heal, everybody is different.....

After 2 days and 2 nights apply the Bepanthen cream, (WITHOUT CLING FILM), frequently throughout the day.

DO NOT soak your tattoo in the bath, shower if possible for the first week.

IF INSTRUCTIONS ARE FOLLOWED CORRECTLY A RE-COLOUR WILL NOT BE NEEDED.....

Please note a RE-COLOUR has to be checked by us within the first 2 weeks to see if it is needed, and has to be photographed.
